

**AMENDMENTS TO THE SPECIFICATIONS**

Please insert the following paragraph, beginning on page 17 at line 5:

An example of how a digitized sheet of film may be electronically cut and ordered may be a computer program provided on a tangible medium, configured to separate digitized images within the digitized sheet of film. The computer program may include routines for accessing a digitized sheet of film resulting from scanning of an analog sheet of film reproduced from image data acquired with a medical imaging modality. For example, the analog sheet of film may be acquired from a magnetic resonance imaging (MRI) system, a computed tomography (CT) imaging, an X-ray imaging system, or some combination of the systems. The digitized sheet of film may have a number of digitized images. The program may also include routines for slicing and collating the digitized image with a digital template, and in some embodiments, the program may include routines for storing the collated digitized images.
